Annotated input
$x \in \Sigma^{\omega}$
$\chi(x)$
Edge
classes
Finite-state expander
$T = (Q, q_0, \delta, \lambda)$
Nonempty
blocks
Target word
$T(x) \in \{0, 1\}^{\omega}$
Source accepted
iff $x \in \mathcal{F}^{\chi}_{B,a}$
Target demand
$\mathrm{gap}_t(T(x))$
Exact target bounds
$U_T(B, a, t) \leq C < R_T(B, a, t)$
